Problematic Observations

Here is a list of observations that we could not calibrate or could not detect any pulsars in and for that reason believe that are unusable and *all* data should be deleted, even the non-redundant ones.

Observations which should be EXCLUDED from Greg's Recombine

Observation ID	User	Reason
1274143152	RB	RB has done recombine on Galaxy
1275561016	AW/CJ	Cosmic Ray will recombine on Pawsey as a test

Observations which are OK to Safe/Raw Delete

Definition

Raw / Safe delete: delete **ONLY** the redundant raw files. This can only happen if an observation:

- Has been recombined
- Has been checked by the PI that the recombined files are OK
- Added to this table by the PI or someone approved by VCS team to do so.

Observation ID	User	Reason	Raw Deleted (Date)
1241121600	RB	checked by RB, safe to delete raw	1-Jul-2020

Observations to be deleted COMPLETELY (Full Delete)

Definition

Full delete= delete ALL data files for this observation.

- This will include:
 - Raw (if any)
 - ICS
 - Combined (TAR) files
 - We generally leave the metafits_ppds file as it could be useful for the health of the array.
- Added into this table by the PI or someone approved by VCS team to do so.

Observation ID	User	Reason	Deleted (Date)
1226406800	Nick	The calibration solutions looked fine but rfind flagged 80% of the observation and broke prepfold	Jun-2020
1180199776	Nick	All calibration observations are missing gpubox 22	Jun-2020
